## *Bulbine frutescens* 'Orange' — Orange African Bulbine

### **Hardiness Zones:**

USDA Zone 9 (20 °F) to

USDA Zone 11 (40 °F)

### **Height:**

Grows 18-24" tall. Space 18-24" apart.

### **Exposure:**

Plant in Full Sun.

### **Bloom Time:**

Blooms throughout the summer.

### **Water Requirements:**

Water once per week until established.

Requires excellent drainage.

## ★ Features: ★

Native to desert grasslands in South Africa, this plant grows well in a well-drained soil and is also very tolerant of poor, dry soil. Bulbine grows best in full sun, has succulent foliage, and produces racemes of star-shaped yellow with orange flowers in the summer months. This plant should be deadheaded to encourage more flowering.
